

RYAN CARRICO

Sound & Audio Engineer | Producer | Digital Audio Consultant Sunnyvale, CA |
rcsubd@protonmail.com | 408-393-0715

PROFESSIONAL SUMMARY

Recording Artist and Producer with 35+ years of hands-on experience in sound engineering, artist development, and studio infrastructure. I approach audio from the perspective of a creator who has built recording and post-production environments from the ground up. My deep intuition for voice characteristics and timbre allows me to provide the high-precision restoration and signal quality checks required for the next generation of generative audio.

TECHNICAL SKILLS

- Industry-Standard DAWs: Nuendo, Reaper, PreSonus Studio One, Cubase, Logic Pro.
- Specialized Audio Editing & Restoration: Wavelab Pro, SpectraLayers.
- Studio Infrastructure: Physical studio construction, acoustic room treatment (decoupling/absorption), and 1,000+ track signal routing.
- Production Workflow: Artist development, end-to-end music production, and AoIP (Audio over IP) digital systems.

EXPERIENCE

Producer, Sound Engineer & Studio Builder 2000 – Present | Independent

I lead end-to-end music production and artist development, drawing on three decades of digital innovation. I design and build professional studios from the ground up—managing everything from physical construction and acoustic decoupling to complex signal chain architecture.

In the restoration and consulting lane, I act as a "golden ear" for audio quality. I use surgical tools like Wavelab Pro and SpectraLayers to strip background noise and digital artifacts while preserving the natural human texture of the vocal. I specialize in AoIP (Audio over IP) digital systems and 1,000+ track signal routing.

Technical CSR & Hardware Triage 1999 – 2007 | The Good Guys

I managed the technical service window, handling hardware triage and warranty routing for computers and consumer electronics. This involved diagnosing issues for end-users at the counter and managing RTV (Return to Vendor) logistics. I was responsible for all technical documentation and coordinating with vendors to ensure hardware was routed correctly for repair.
